

LED LAMP FOR PHOTOPERIOD 600 W

LED LAMP FOR PHOTOPERIOD 600 W SEA WATER

We have a wide range of photoperiod equipment for seawater with powers and performances suitable for fish farming.

Our LED lamps for the fattening phase allow absolute control of early maturity and a considerable increase in growth rates in fish.

All this added to our failure rate, which today is the lowest in the market.

Our LED lamps can also be integrated and connected to our LED lamp monitoring and control software, better optimizing the production cycles of our clients.

Consumption	600 W of power
Luminous efficiency	161 Lm/W
Weight (includes cable KG)	12,5 kg
Cable length	50 m long
Useful life	30,000H
Application	Degree of protection IP68. CE certification. Option to dimmer, control and monitoring software.
